Re: Ex Parte Presentation of the Information Technology Association of America
– CC Docket 02-33, CC Docket 01-337, & CC Docket 96-45

Dear Ms. Dortch:

Pursuant to 47 C.F.R. § 1.1206(b), this letter is to inform you that *ex parte* presentations were made on Thursday May 22, 2003 at meetings regarding issues in the above-referenced proceedings.

Participating in the meeting were: Jane Jackson, Bill Maher Carol Matthey, and Brent Olson of the WCB.

They met with; Kim Ambler, Dir, Industry & Policy Affairs of the Boeing Company and Chairman of the ITAA Telecommunication Policy Committee Jonathan Jacob Nadler of Squire, Sanders & Dempsey, LLP, representing ITAA; and Mark Uncapher, Senior Vice President of Internet Commerce & Communications Division of ITAA.

The issues addressed in this meeting are outlined fully in the attached written *ex parte* presentation, which was provided during the meetings. Subsequent to the meeting, the attached *ex parte* letter dated October 17, 2003 that had been previously submitted for CC Dockets 02-33 and 01-337 (Proposed Deregulation of ILEC-Provided Broadband Telecommunications Services and Elimination of

The Commission Should Preserve the Competitive, Unregulated Broadband Information Services Market

May 22, 2003

I. Introduction

- ITAA is the principal trade association of the computer software and services industry
 - 500 U.S. members, from multinational corporations to locally based enterprises
 - Many of ITAA's members are Information Service Providers, which remain critically dependent on the ILECs for broadband and narrowband telecommunications services
 - For thirty years, ITAA has participated in Commission proceedings, including all aspects of the *Computer Inquiries*, governing ILECs' obligations to provide the telecommunications services that ISPs require to serve their subscribers
- Overview of the Presentation
 - Today's competitive ISP market provides significant consumer benefits
 - ILECs remain dominant in the provision of wholesale broadband telecommunications services that ISPs use to serve their mass-market customers
 - The Commission should retain the ILECs' *Computer II* unbundling obligations
 - The Commission cannot, and should not, require ISPs to make direct payments to the Universal Service Fund

II. Today's Competitive ISP Market Provides Significant Consumer Benefits

- ISPs are more than fungible "conduits" to information
- ISPs compete based on a variety of factors, such as: price, service level, applications support, proprietary applications, premises equipment, security, and privacy

- Competition among ISPs has led to lower prices, increased quality, and significant innovation; it has also ensured that consumers have unimpeded access to on-line information

III. The ILECs Remain Dominant in the Provision of Wholesale Broadband Telecommunications Services That ISPs Use to Serve Mass-Market Customers

- ILECs remain dominant in the market for “wholesale mass-market broadband telecommunications services”
- CLEC “intra-modal” competition does not effectively constrain the ILECs’ ability to discriminate in the provision of mass-market broadband telecommunications services; indeed, competitive provision of DSL will become even more difficult as a result of the Commission’s decision to eliminate the line-sharing requirement
- Cable systems do not provide effective “inter-modal” competition; while some cable systems are “partnering” with a handful of selected ISPs, *no* cable system has offered to make broadband capacity generally available to any requesting ISP

IV. The Commission Should Retain the ILECs’ *Computer II* Unbundling Obligations, While Eliminating Unnecessary Regulations

- Elimination of the *Computer II* unbundling obligation would have a significant adverse impact
 - The ILECs could drive non-affiliated broadband ISPs from the market by refusing to provide broadband telecommunications – or by providing service at higher prices, or on far less favorable terms, than those enjoyed by the ILECs’ information service operations
 - This would result in a broadband duopoly consisting of an ILEC-affiliated and a cable-affiliated broadband ISP
 - This, in turn, would increase demands for government regulation designed to prevent ISPs from restricting consumers’ access to on-line content
- Concerns about broadband facilities deployment and “regulatory symmetry” do not provide a basis for eliminating the *Computer II* unbundling rule

- The “unbundling” required by the *Computer II* Rules is fundamentally different from the “unbundling” required by the *Local Competition Order*; the *Computer II* Rules merely require the ILECs to offer telecom services that they have chosen to provide to their ISP affiliates to non-affiliated ISPs on just, reasonable, and non-discriminatory terms
- The fact that cable system operators are not legally obligated to provide unbundled transmission service on request – and because, in practice, they do not do so – makes it *more* important to ensure that the ILECs fulfill their common carrier obligations
- The Commission should eliminate ineffective rules, while linking the removal of effective competitive safeguards to the availability of competitive alternatives to the ILECs’ wholesale broadband transmission services
 - The Open Network Architecture and the CEI Plan regime serve no useful purpose; they should be eliminated
 - The Commission should retain effective safeguards – such as the *Computer II* unbundling requirement – until the ILECs can demonstrate that ISPs have a meaningful choice of broadband transmission service providers

V. The Commission Cannot and Should Not Require ISPs to Make Direct Payments to the Universal Service Fund

- Because ISPs use – rather than “provide” – telecommunications, the Commission does not have legal authority to require ISPs to make direct payments to the USF
- Concerns about “sufficiency” or “competitive neutrality” do not provide a basis to require ISPs to make direct payments to the USF
 - Adoption of a connection-based assessment methodology will address concerns about the sufficiency of the USF
 - Because ISPs do not compete against telecommunications carriers in the provision of telecommunications, the *current regime is fully* consistent with competitive neutrality
- Treating ISPs like carriers for *universal service* purposes would undermine the Commission’s long-standing policy of treating ISPs as end users for *access charge* purposes.
